

Mubashir Irfan

Senior Frontend Engineer

+971-542762711 | mubashir.irfan37@gmail.com | [LinkedIn](#)
Abu Dhabi, United Arab Emirates

Summary

Senior Frontend Engineer with ~6 years of experience developing scalable, performant web applications. Experienced in building web products from scratch, developing business-critical web app workflows, building a culture of engineering excellence and driving processes across multiple teams. Driven by empathy in UI/UX for end users and peer contributors. Open to both Individual Contributor and Lead/Managerial roles.

Work History

Senior Software Engineer

[LocAI](#)

Apr 2024 - Present

Abu Dhabi, UAE

At LocAI, I am building an AI-powered EdTech SaaS from scratch. I wrote the application's bootstrap code, designed and implemented the auth architecture, access management, backend integration, telemetry and analytics from scratch. In parallel, I also contribute to developing a healthy culture and collaboration within the Engineering team, as well as leading presentations in company-wide Frontend Chapter meetings.

- Developing Iqraa Dashboard with **NextJS, TypeScript, React**
- Implementing with **Headless UI, Mantine**, and **TailwindCSS**
- Implementing State Management with **Redux**
- Developed custom **Authentication** and **Authorization** architecture using **React Query** and **Redux** from scratch
- Developed custom API integration layer with **React Query**
- Integrated custom auth architecture with a centralized **Identity** and **Access Management Platform**
- Implemented Engagement Analytics Pipeline with **Rudderstack, Mixpanel, Google Analytics**
- Implemented multi-language support and **Internationalization** for RTL Languages
- Writing **unit tests** in **Jest** to ensure use case coverage

Senior Software Engineer

[Careem](#)

Feb 2023 - Apr 2024

Dubai, UAE (Remote)

At Careem, I was hired to build the **Careem Bikes** and EV Delivery Admin Dashboard from scratch. I wrote the repo from scratch, designed and developed the Backend Integration Architecture, wrote integration with Careem Platform, and implemented service monitoring with Prometheus and Grafana. I was also involved in **Careem Bikes launch in Madina**, setting up our commercial communications and Mobile Notifications in Arabic.

- Developed Careem Bikes Admin Dashboard with **NextJS** and **TypeScript**
- Implemented UI styles with **TailwindCSS**
- Wrote **unit tests** in **Jest** to ensure use case coverage
- Wrote API Integration Layer with **React-Query**
- Implemented State Management with **Context**
- Implemented Observability and Monitoring with **Grafana** and **Prometheus/PromQL**
- Implemented Internationalization and Arabic Translations of FE notifications and comms for Bikes Madina Launch
- Conducted technical interviews for hiring Frontend Engineers

- Wrote **HTML**, **CSS**, and **TypeScript** in **React**, participating in **peer code reviews** and **pair programming**
- Developed **automation tools** to reduce the manual workload of GIS operations teams
- Developed an automated deck generator saving company approximately 100 hours per month
- Conducted **technical interviews** for hiring potential candidates, **mentoring** and **onboarding** new hires
- Designed collaboration and development **processes** for multiple teams to streamline development
- Drove process-enforcing for 3 teams to increase productivity by 40% to 50% and reduce backlog
- Led development on a setup portal to reduce 40% of setup time for the ops team

- Wrote **TypeScript**, and **RxJS** in **Angular 2+**, **Ant Design**, and **Unit Tests** for an **enterprise** application
- Served as frontend **on-call engineer** every quarter for monitoring of production, **hot-fixing** 2 production **escalations**, authoring 1 blameless post-mortem report
- Implement **instrumentation solutions** for analyzing 100% of possible user interactions with a business-critical workflow using **Pendo** and **Mixpanel**
- Implemented an internal tool for training 100s of data annotators
- Led conversion of a major **legacy workflow** into a **mobile-friendly responsive** implementation
- Conducted technical interviews, knowledge-sharing sessions and authored technical design documents

- Developed **Angular 2+** powered dashboard with **Material UI**, **RxJS**, **WebSockets**, **NgRx**

Skills

Core Frontend:	HTML, CSS, JavaScript / TypeScript
Frameworks/Libraries::	React, NextJS, Tailwind CSS Angular 2+, / ShadCN / Ant Design / Material UI / Headless UI
State Management:	Redux / Context API / Zustand / NgRx
Real Time:	Web Sockets / Server-Sent Events / AI text streams
Unit Tests:	Jest, Jasmine
Reactive Programming:	RxJS / RxTS
Monitoring & Observability:	TrackJS, Grafana, Prometheus, Sentry
Usage Analytics/Onboarding:	RudderStack, Google Analytics, Pendo, Mixpanel, Intercom / AppCues
Version Control:	Git / Github / BitBucket
Misc:	REST / Authentication & Authorization / Identity & Access Management
